

COMET-latency trade-off on CoVoST2 en-de 300 · gtx, T = 4/6/8/12

Punctuation has no latency knob (it segments below the T budget), so it is one point, not a curve.

It and prefix-match MU sit in a slower latency band — shown, but not matched head-to-head.

Empty x ranges are compressed (break marks on the axis). COMET: wmt22-comet-da (reference-based).
